# Kanban VS Scrum

Within the Agile approach there are two different 'frameworks' (also called 'methods' or 'methodologies') that are fundamental: Kanban and Scrum

# Commonalities between Kanban and Scrum

1. Both are known for their material display: the 'Board'

# Commonalities between Kanban and Scrum

2. Both Kanban Boards and Scrum Boards use the famous 'post-its' (cards) to communicate the progress of work

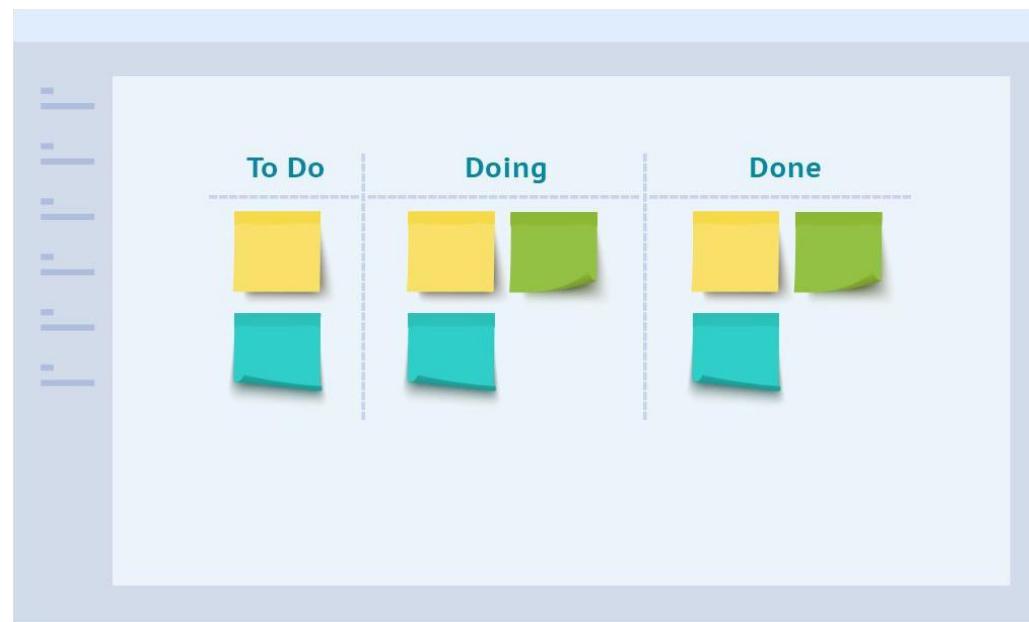

# Commonalities between Kanban and Scrum

3. Progress is indicated by 'Columns' through which the different cards pass, from left to right

# Commonalities between Kanban and Scrum

4. ToDo - Doing - Done are the 'canonical' (Status) columns, but teams usually expand the number and type of statuses according to their needs.

# Commonalities between Kanban and Scrum

---

5. The cards that appear on the board can be of different categories

# Anatomy of an agile board

# Features of the Kanban board

- A Kanban board monitors the flow of the process by limiting the number of ongoing work activities.
- The number of ongoing activities is small enough to avoid unimportant tasks, but large enough to reduce idle personnel.

Kanban is like a basketball game: a completed activity equals one point and the team tries to minimise the time between shots.

# Features of the Scrum board

---

- A Scrum board tracks the work done within fixed duration cycles, called 'Sprints'. A Sprint is a short, consistent and repetitive period of time.
- The length of the Sprint is short enough to keep the team focused, but long enough to provide an appreciable increment of work for the customer.

Scrum is like an exam at university: you have to complete a series of exercises in a certain time period, within which no other activities are allowed.

# Kanban VS Scrum

## Work in progress limits

- Scrum limits the WIP per iteration. The team must commit to the number of tasks in the Sprint. Nothing prevents having all cards in the "In Progress" status simultaneously.

- Kanban limits the WIP per status. The number "5" in the "In Progress" column means that there should be no more than 5 cards in that workflow status.

**Work In Process:** a term used to indicate the number of parts (or batches) processed simultaneously within a production system. This is the material leaving one stage of the process waiting to be processed by the next.

# Kanban VS Scrum

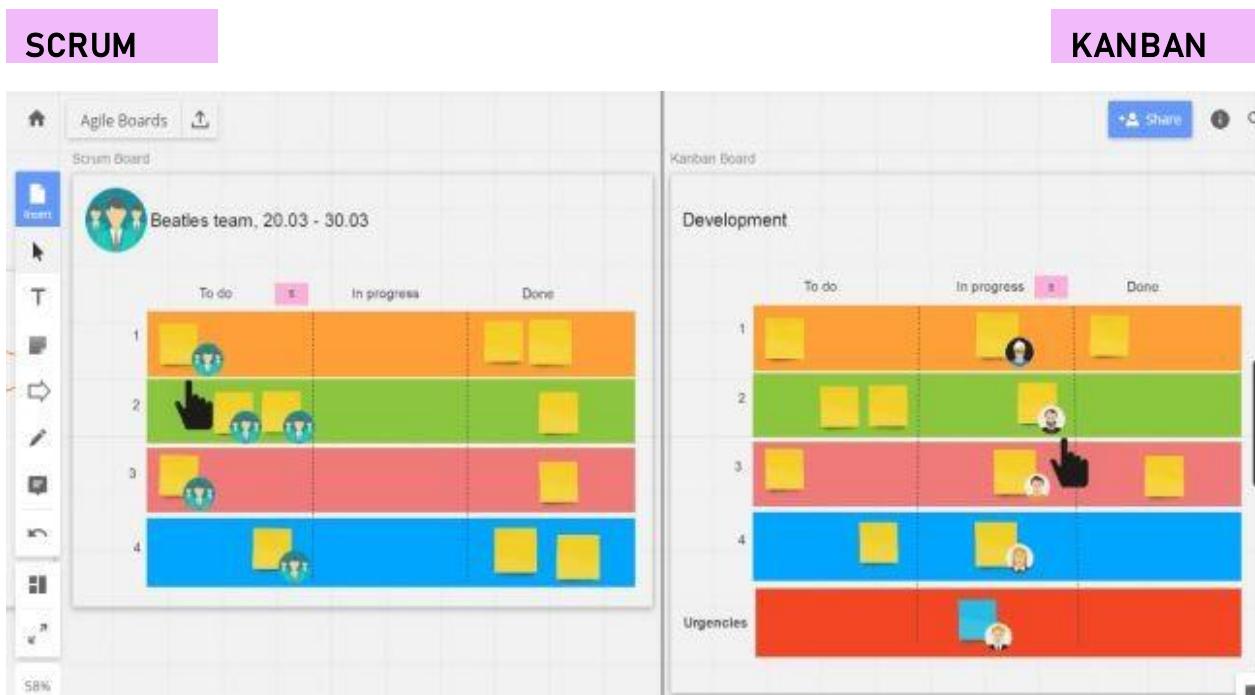

## Owners

- In Scrum, the board is always 'owned' by a single Scrum team (= cross-functional group of people with all the necessary skills to successfully complete each Sprint activity).
- Kanban board does not need to be owned by a specific team since it is mostly dedicated to a (monofunctional) workflow.

# Kanban VS Scrum

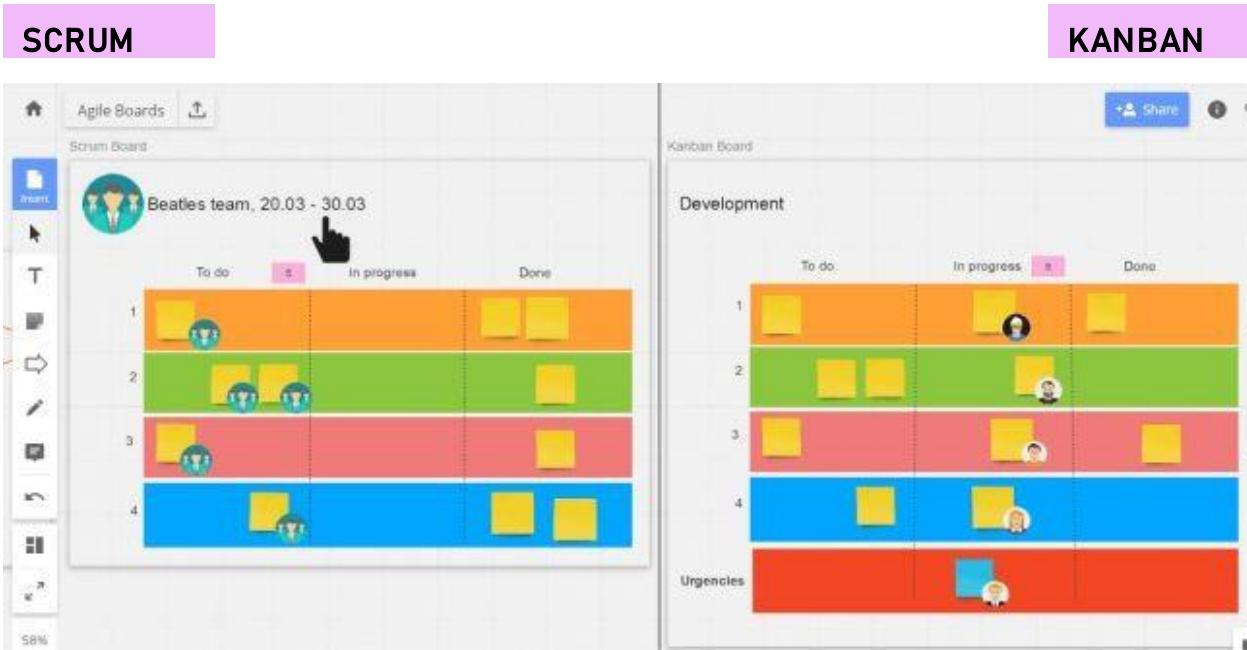

## Task devotion

- In Scrum, the entire team converges on each task.
- In Kanban, each person is responsible for his or her own flow of work. However, Kanban has a culture of scarce resources to help solve the so-called 'bottlenecks' → If one person has completed his or her task but there is something complicated in a column of the board (a bottleneck, in fact), he or she can choose whether to help his or her partner complete the task or take another task from the queue.

# Kanban VS Scrum

## Changes within an iteration

- In Scrum, the team should not add any new cards on the board during the Sprint. The number of cards is defined during the planning session, before the start of the iteration.
- On the other hand, a Kanban board can be changed at any time; the only limitation concerns ongoing activities → As soon as a card moves from 'In Progress' to 'Done', capacity is freed up to be used for a new activity/card (continuous flow).

# Kanban VS Scrum

## Urgencies (tickets)

- Thanks to previous analysis, planning, sizing and prioritisation sessions, the Scrum team rarely has to deal with unforeseen urgencies.
- In Kanban, an 'Urgencies' line (also called Swim Lane) can be inserted → Cards that end up there identify an unpredictable urgent task or a task that arises to solve a 'bottleneck' card. They have the highest priority, so some team members converge on it to complete it as soon as possible.

# Kanban VS Scrum

## Roles

- Scrum master
- Product Owner
- Team Members

- Not predefined
- Convergence when a member is in trouble

# Kanban VS Scrum

## Due Dates

- Sprint plan (time-box)

- Continuous flow
- Event-based

# Kanban VS Scrum

## Priorities

- New tasks only allowed when the entire 'batch' is completed

- New tasks only allowed when previous ones are completed

# Kanban VS Scrum

## Modifications

- Strongly discouraged

- Permitted (encouraged)

# Kanban VS Scrum

Best for...

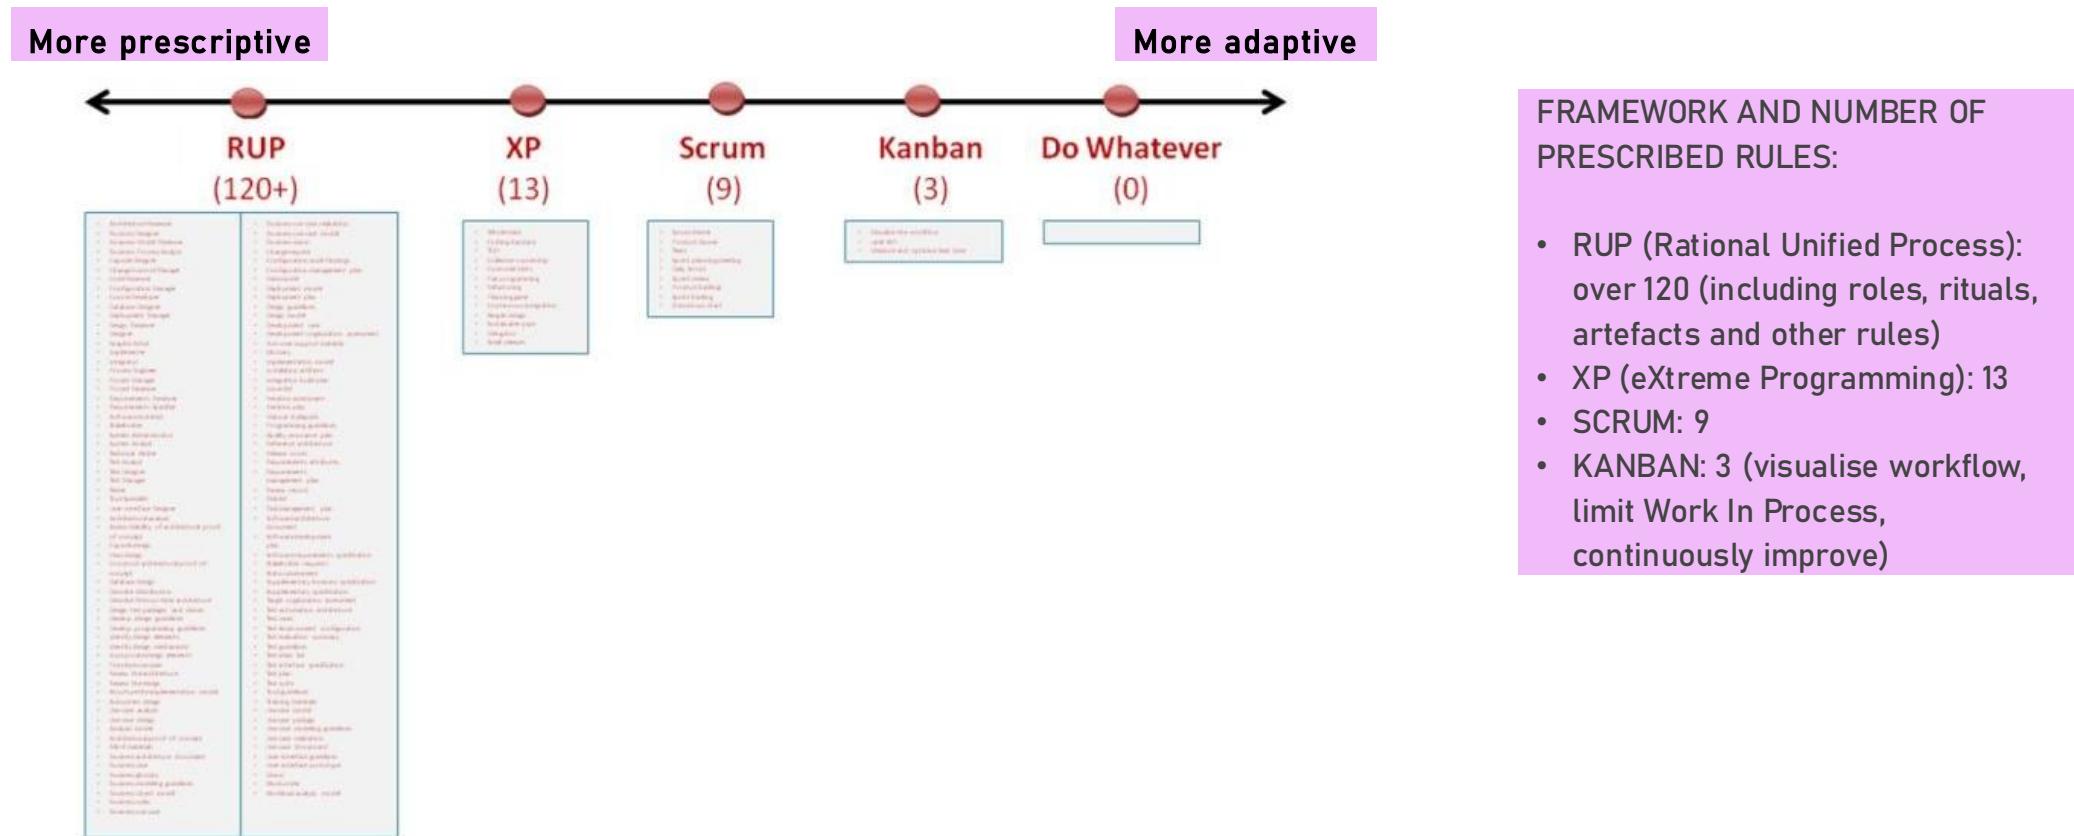

- Stable priorities that vary less in the processing cycle

- More variable scope of work

# Kanban VS Scrum

## 'Prescriptiveness scale' of agile frameworks

## 2.2 Agile in ‘non-development’ processes (2.5 hours)

Co-funded by  
the European Union

Funded by the European Union. Views and opinions expressed are however those of the authors only and do not necessarily reflect those of the European Union or Agency for Mobility and EU Programmes. Neither the European Union nor the granting authority can be held responsible for them.

# Which processes?

Processes, depending on their role within the organisation, can be classified in different ways. Starting from Stalk and Hout's definition, we can identify:

- 1) OPERATIONAL PROCESSES
- 2) SUPPORT PROCESSES
- 3) CONTROL PROCESSES

# Which processes?

Processes, depending on their role within the organisation, can be classified in different ways. Starting from Stalk and Hout's definition, we can identify:

- 1) OPERATIONAL PROCESSES
- 2) SUPPORT PROCESSES
- 3) CONTROL PROCESSES

# Which processes?

## 1) OPERATIONAL PROCESSES

They directly concern the creation of products or services. They are the processes that, more than others, directly provide added value to the product/service.

E.g. design, production, sales.

# Which processes?

## 2) SUPPORT PROCESSES

They support operational processes in order to make them more effective and efficient.

E.g. commercial management, information system, human resources, financial management, procurement, etc.

# Which processes?

## 3) CONTROL PROCESSES

Processes that drive the entire Quality Management System.

E.g. review of the Quality Management System, definition of the organisation's objectives, measurement of results, development of strategies, etc.

## Examples of processes that can be managed with agile

---

- Ensuring the correct execution of a project (also in PA)
- Selling
- Manage customer communications (marketing activities, etc.)
- Monitor customer satisfaction
- Manage resources (manage financial transactions, process internal and external information reporting, fulfil legal obligations)

# Agile board for after-sales management

## 2.3 Roles and rituals (2 hours)

Co-funded by  
the European Union

Funded by the European Union. Views and opinions expressed are however those of the authors only and do not necessarily reflect those of the European Union or Agency for Mobility and EU Programmes. Neither the European Union nor the granting authority can be held responsible for them.

# Roles

**Role:** set of behaviours, rights, duties, beliefs and norms related to and accepted by people in a certain social context

- Product Owner
- Scrum Master
- Team members

# Product Owner

- Is responsible for the product/project
- Adds new activities
- Has the final say on the priority and order of activities

# Scrum Master

- Schedules meetings (rituals)
- Supervises their proper functioning
- Reminds the team of the "fundamentals" of the method

# Team members

- Make up the working group
- They carry out a portion of the project activities

# Product Owner VS Scrum Master

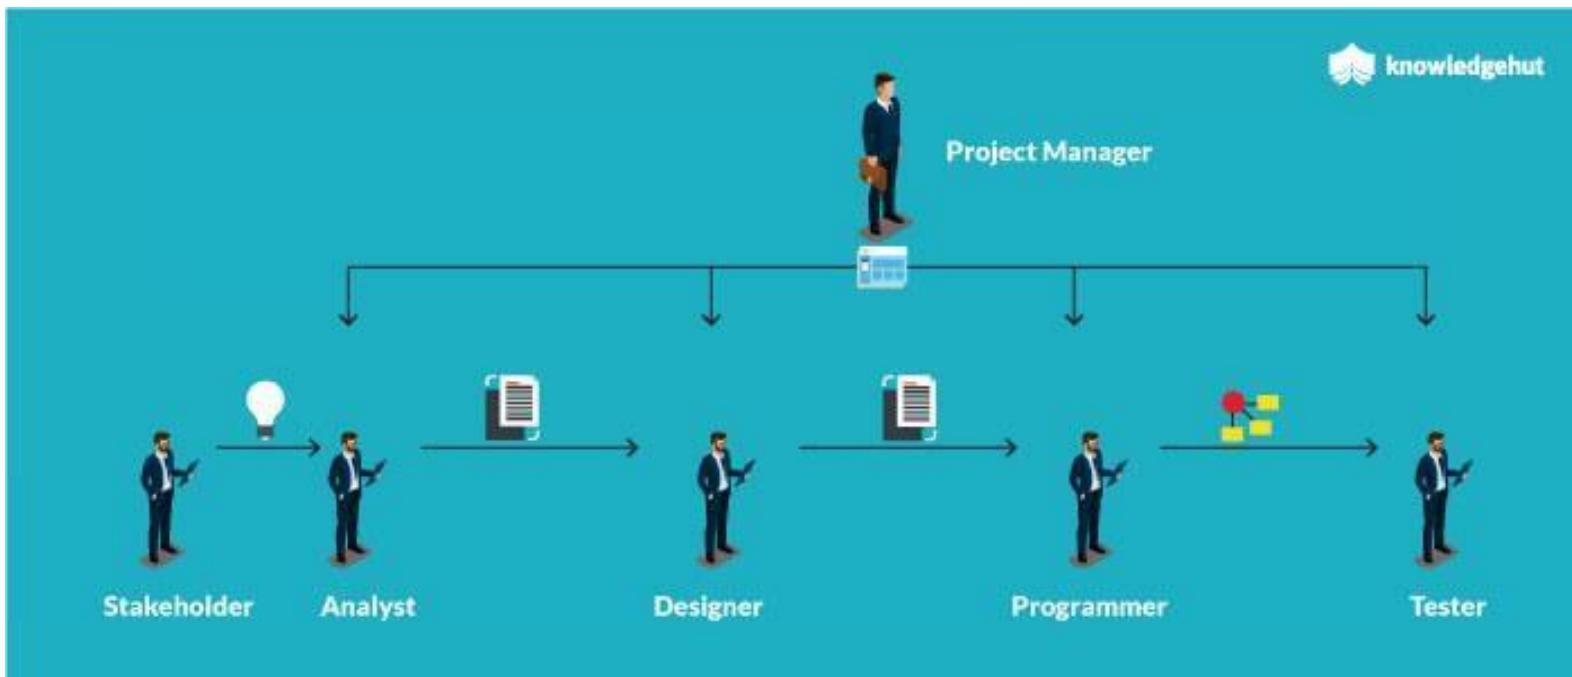

---

Product Owner: product development manager

Product Manager: responsible for strategy, roadmap, budget

Given the substantial overlapping of roles it is better to use only the Product / Project Manager.

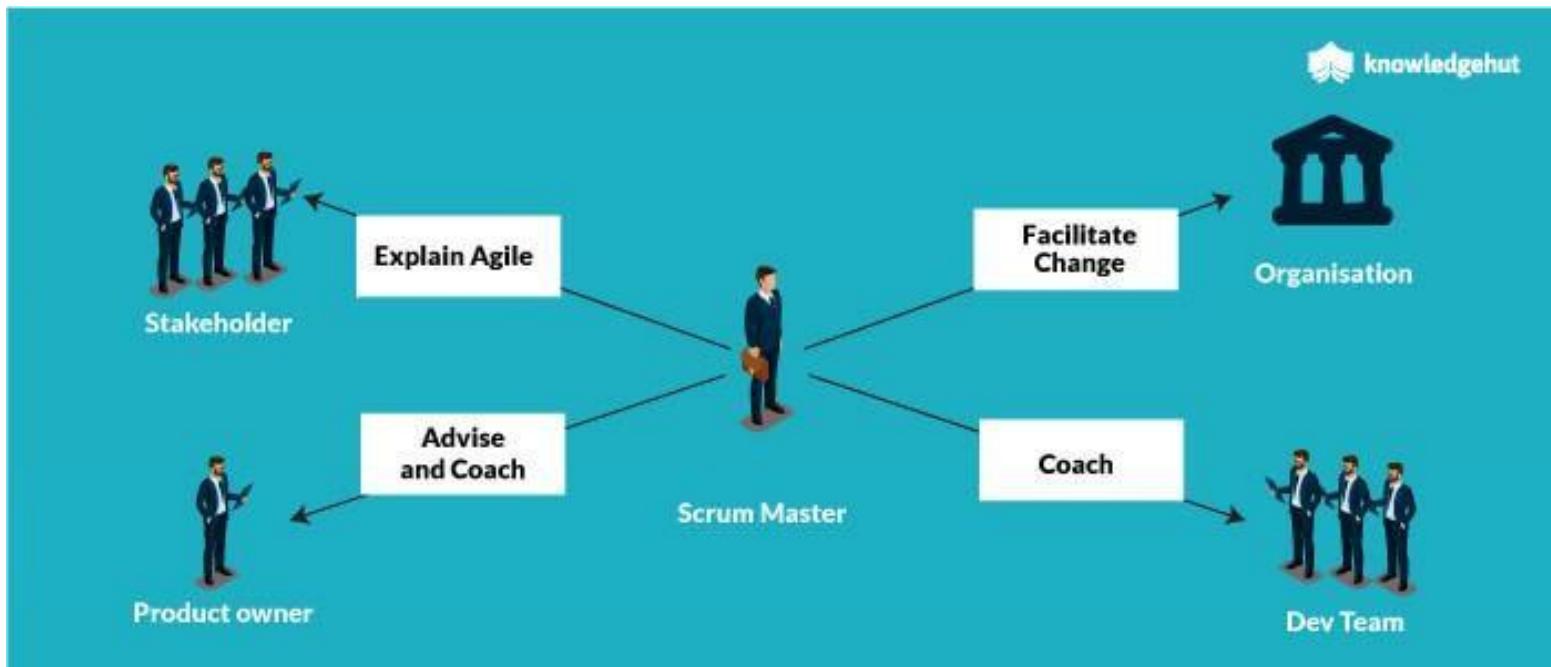

# Product Owner VS Scrum Master

# Product Owner VS Scrum Master

# Product Owner VS Scrum Master

# Rituals

Ritual: sequence of activities involving gestures, words and objects, performed in a given place and according to a predetermined sequence.

- Sprint planning
- Daily stand-up meeting
- Sprint retrospective

# Sprint planning

- The entire team participates.
- The product owner sets the highest project priorities.
- The team asks questions that help break down the entire project into detailed tasks.
- The team (not the product owner) determines the amount of work to be performed in the sprint (self-managed teams).
- The session ends only AFTER defining one or more sprint goals (a short description of the goals to be achieved) and a sprint backlog (list of tasks to be performed).

# Sprint planning

# Daily stand-up meeting

- The daily standup meeting (or daily scrum) is the daily practice at the heart of agile, to be carried out in the same place and at the same time every day, preferably in the morning.
- These meetings should last no longer than 15 minutes and are intended for all team members.
- It is important that the meeting is focused more on status updates than on problem solving (which should instead concern only certain team members).
- This practice dictates the pace of the project and keeps team members 'committed' to the goal.

# Daily stand-up meeting

Time box

Same place

Same time

Facilitated by  
Scrum Master

Full team  
presence

Focus on 3  
questions

## 3 Main Questions:

1. What did I do yesterday?
2. What will I do today?
3. What's in my way?

# Sprint retrospective

- In the retrospective, the team looks for ways to improve the work from what happened during the sprint.
- The whole team participates and it usually lasts one hour at the most.
- Three questions are answered during the retrospective:
  - what the team should start doing
  - what the team should stop doing
  - what the team should continue to do
- The Scrum Master facilitates this ritual.

## 2.4 Focus on Scrum Master certifications (1 hour)

Co-funded by  
the European Union

Funded by the European Union. Views and opinions expressed are however those of the authors only and do not necessarily reflect those of the European Union or Agency for Mobility and EU Programmes. Neither the European Union nor the granting authority can be held responsible for them.

# Scrum Master certifications

Here is a list of the most important and widely recognized Scrum Master certifications, including their issuing organizations, focus areas, and suitability for different levels of experience:

1. Certified ScrumMaster® (CSM)
2. Professional Scrum Master™ (PSM I, II, III)
3. SAFe® Scrum Master (SSM)
4. Scrum Master Certified (SMC®)

# 1. Certified ScrumMaster® (CSM)

**Issuing Organization:** Scrum Alliance ([scrumalliance.org](http://scrumalliance.org))

**Level:** Entry-level (ideal for beginners to Scrum or transitioning project managers)

**Duration:** 2-day course + online exam

**Renewal:** Every 2 years (requires Scrum Education Units - credits - and a fee)

**Focus:**

- Scrum basics (roles, events, artifacts)
- Facilitation, coaching, servant leadership
- Responsibilities of a Scrum Master

## 2. Professional Scrum Master™ (PSM I, II, III)

**Issuing Organization:** Scrum.org ([scrum.org](https://scrum.org))

**Levels:**

- PSM I – Foundational (most popular)
- PSM II – Intermediate (focus on real-world application)
- PSM III – Advanced (difficult, essay-based)

**Duration:** no course required, self-study possible

**Renewal:** Lifetime certification

**Focus:**

- Strong on Scrum theory and principles
- Emphasizes deep understanding over rote memorization

### 3. SAFe® Scrum Master (SSM)

**Issuing Organization:** Scaled Agile, Inc. ([scaledagile.com](http://scaledagile.com))

**Level:** Intermediate

Ideal for Scrum Masters working in enterprises using SAFe

**Duration:** 2-day course + online exam

**Renewal:** Annual (with fee)

**Focus:**

- Scrum Master role in Scaled Agile Framework (SAFe)
- PI (Program Increment) planning, agile at scale
- Coordination across teams in larger organizations

## 4. Scrum Master Certified (SMC®)

**Issuing Organization:** SCRUMstudy ([scrumstudy.com](http://scrumstudy.com))

**Level:** Beginner to intermediate

**Duration:** 2-day course + online exam

**Renewal:** Every 3 years (requires a fee)

**Focus:**

- Scrum lifecycle
- Roles and responsibilities
- Real-world scenarios

**Criticism:** Less recognized compared to CSM and PSM

# Scrum Master certifications - Comparison Summary

<i>Certification</i>	<i>Organization</i>	<i>Level</i>	<i>Renewal</i>	<i>Exam Required</i>	<i>Highly Recognized</i>
<b>CSM</b>	Scrum Alliance	Entry	Yes	Yes	
<b>PSM I</b>	Scrum.org	Entry	No	Yes	
<b>PSM II/III</b>	Scrum.org	Advanced	No	Yes	
<b>SSM</b>	Scaled Agile	Intermediate	Yes	Yes	
<b>SMC</b>	SCRUMstudy	Beginner	Yes	Yes	(less common)

# Choosing the right Scrum Master Certification

**CSM**  
Best for beginners  
Widely recognized

**PSM I**  
Strong theory focus  
No renewal

**PSM II/III**  
Deep expertise  
Challenging exams

**SSM**  
Agile at Scale  
Great for enterprise

**SMC**  
Accessible  
Less recognized

New to Scrum? → Start with **CSM** or **PSM I**

Want a deep understanding + no renewal? → Choose **PSM I**

Working in enterprise/large teams? → Go for **SSM**

Interested in long-term Scrum career? → Progress to **PSM II/III** or **SAFe**
